AdventureWorks Cycles - Business Analysis Summary Report

Analysis Period: May 2011 – June 2014

1. Perspective and Focus Area

This report analyzes AdventureWorks Cycles from three business perspectives: sales performance, territory performance, and product performance. The goal is to identify revenue trends, understand major business drivers, and highlight opportunities for growth.

2. Executive Summary

AdventureWorks Cycles generated approximately \$123.2 million in revenue across 31,465 orders from 19,820 customers during the analysis period. Revenue increased strongly between 2011 and 2013, reaching a peak of \$48.97 million in 2013. Bicycles were the main revenue contributor, representing about 87% of total sales, while North America remained the strongest performing region.

3. Key Assumptions About the Data

The analysis assumes that all recorded transactions represent valid completed sales because all orders had a completed/shipped status. Order-level revenue was calculated using order totals, while product-level analysis used sales line totals. The 2014 data covers only January to June, so it was treated as a partial-year result. Sales quota analysis only included representatives with assigned quotas.

4. Methodology and Derivations

The analysis involved combining sales, customer, territory, and product datasets. Calculations included total revenue, yearly revenue trends, average order value, territory revenue contribution, product category performance, and salesperson quota achievement. Product analysis was derived by connecting product categories, subcategories, products, and sales details.

5. Key Insights

Sales Performance: Revenue increased consistently from 2011 to 2013. The average order value was approximately \$3,916, showing that the business operates with a high-value product mix. Online orders represented most transactions, but sales representatives generated a larger share of revenue, suggesting assisted sales drive higher-value purchases.

Territory Performance: North America contributed around 66% of revenue, with Southwest being the strongest territory. European markets contributed meaningful revenue but have room for further growth.

Product Performance: Bikes generated the majority of revenue, especially the Mountain-200 range. Accessories and clothing contribute a smaller percentage, creating opportunities for cross-selling and product bundling.

6. Recommendations

- Increase sales quotas because current targets appear below actual salesperson performance.
- Develop targeted strategies for European markets to improve regional growth.
- Promote accessories and clothing through bundles and cross-selling.
- Improve online sales value through better recommendations and upselling strategies.
- Continue supporting high-performing territories such as Southwest.

7. Conclusion

The analysis shows that AdventureWorks Cycles has a strong business foundation driven by bicycles, high-value orders, and strong regional performance. Future growth opportunities include expanding weaker markets, improving online revenue generation, and increasing sales from non-bike categories.
